SUMMARY

I run the operations of UniCredit's regulated Open Banking platform in 9 markets, for 600 licensed third-party providers. I also build AI products with Claude Code: tool-calling assistants, LangGraph agents with human approval, evaluation harnesses with accuracy gates and LLM tracing in Langfuse. On the Digital Euro I built a bank-side operations console and published 5 articles and a trade-press interview. 15+ years in banking and payments across UniCredit, Nordea, GE Capital and Attra.

EXPERIENCE

UniCredit

Munich, Germany

Product Manager, Service Operations (PSD2 / Open Banking)

2019 - Present

- I run UniCredit's Open Banking platform for 600 licensed third-party providers across 9 markets, ~37M API calls a month. I am accountable for the availability figures the bank publishes under PSD2. Those figures keep all 9 markets exempt from building a contingency interface.
- I lead the diagnosis when an incident hits the platform and assess each major incident for regulatory reporting across the 9 markets.
- I drove the Splunk monitoring and alerting framework across 9 markets, run as a weekly forum inside ITIL incident management. Regulatory incidents fell from 6 in 2021 to none after the alerting went live in 2022.
- I measure platform usage and build the dashboards for it. My SPL analysis of 222.3M calls in the first half of 2026 showed 14 of the 600 providers carry 80% of calls. I plan onboarding, support and reliability around it.
- I wrote the change-introduction procedure the platform now runs on, because a change that breaks a provider's integration is a regulatory event. It requires 3 months' notice for any change that touches providers and puts the code in the sandbox first.
- I drive around 120 provider tickets a month to resolution, from onboarding to eIDAS certificates and API specification queries. The answers go into regulator audits as evidence, and I answer the IT side of those audits. I also give the IT-side input to the PSD3 and Payment Services Regulation feasibility work.
- I own the platform's digital roadmap and refine the business requirements that 9 country organisations raise, influencing engineering, security and vendors outside my reporting line. Call volume more than doubled with ticket volume flat, and I cut run cost in 2 consecutive group cost programmes. A Copilot triage flow I built into my own workflow cut incident resolution time by 34%.

Nordea

Gdansk / Gdynia, Poland

Senior IT Service Manager

2018 - 2019

- Owned the Capital & Credit Risk and General Ledger portfolio behind the bank's regulatory capital reporting, a SAP, ETL and mainframe stack run by 2 global providers. Changed its commercial model from Time & Materials to Managed Services with no disruption at cut-over. When the new model began breaching its SLAs 4 months in, I chaired the rebuild of SLA tracking, escalation routes and performance reviews. The technical artefacts the business needed for its regulatory reports came 36% faster.

Service Transition Manager

2016 - 2018

- Designed the Nordea Service Transition Framework from a blank page and ran the campaign that made it the standard across a ~200 FTE estate and ~70 applications. Ran all 5 transitions on time and on budget.

Attra (deployed to GE Capital / Bank BPH as an external vendor)

Gdansk, Poland

Service Delivery Lead

2014 - 2016

- Stood up a 24x7 support function from scratch for the client's Postilion card switch (ACI Worldwide), carrying around 800,000 payment authorizations a month. I built the operating model on ITIL, the shift design and the KPI and reporting layer behind a 2-hour major incident SLA, with an 8+ member team. When FICO Falcon joined the contract, I absorbed it into the same function.

Attra (delivering to GE Capital Australia & New Zealand)

Bangalore, India

Senior Software Engineer, later project lead

2010 - 2014

- Project lead on 2 Mastercard and Visa scheme-compliance releases on the client's VisionPLUS card-processing platform, from proposal to production against fixed scheme dates, hands-on in ISO 8583 and the mainframe stack underneath. Both shipped on the mandate date.

SELECTED AI PRODUCT BUILDS

Built alongside the day job, with Claude Code, on sandbox and synthetic data. All 6 builds are in [my portfolio](#).

Multi-bank money assistant on Open Banking data

[Live demo](#) · [Repository](#)

A multi-tenant PSD2 aggregator across 4 EU banks' sandboxes, with a Claude Haiku assistant that answers money questions across every connected bank. The LLM picks the tools, and code computes every figure. The assistant answered 18 of 18 evaluation cases correctly. The LLM categoriser scores 93% against 44% for keyword rules (n=90) and runs nightly behind an 85% accuracy gate. Python / Flask.

Lending decision engine with its own AI audit

[Live demo](#)

The engine turns Open Banking data into an explainable credit decision. I audited its LLM pipeline against 10 control tests: 7 passed, 2 passed in part and 1 failed. Langfuse traces every LLM call, and a hard daily call budget fails closed. TypeScript / Next.js.

Open Banking payment agent

[Live demo](#)

An agent that initiates account-to-account payments on the TrueLayer sandbox. It checks that the payee name owns the account before any money is sent, and stops for human approval when something looks wrong. The LLM advises and never makes the payment decision. Built on LangGraph, with a versioned evaluation suite.

DIGITAL EURO: BUILD AND PUBLISHED ANALYSIS

Self-directed work, built with Claude Code and sourced from public ECB and EU documents.

Digital Euro: PSP operations console

[Live demo](#)

A console for the bank and payment-service-provider side. I built it to work through the scheme rulebook before I wrote about it. It covers holding limits with waterfall funding and defunding, ISO 20022 settlement messaging over DESP and TARGET, a compliance view and a phased adoption plan.

- **Articles:** 5 on LinkedIn between July and August 2026, on [the rulebook v0.91](#), [the 36 pilot providers](#), [programmability](#), [accessibility](#) and [the fee ceiling](#).
- **Interview:** The Paypers, August 2026, on [Open Banking and the Digital Euro](#).

SKILLS

- **GenAI products & LLM operations:** Tool-calling assistants and LangGraph agents with human approval; evaluation harnesses, LLM-as-judge and accuracy gates; prompt versioning, tracing and human review in Langfuse; per-call cost tracking and daily call budgets; local LLMs (Ollama, Qwen); Claude Code and Microsoft Copilot in daily use.
- **Payments & regulation:** PSD2 and the Berlin Group standard, consent and SCA; PSD3 and the Payment Services Regulation; Verification of Payee; ISO 20022; card authorization, clearing and settlement on ISO 8583; eIDAS certificates; the Digital Euro scheme rulebook; EU AI Act; DORA.
- **Operations & governance:** ITIL incident, problem and change; regulatory incident reporting decisions across 9 markets; monitoring and alerting with per-market thresholds; 24x7 shift design; service tiers, SLAs and KPI reporting; supplier governance; service transition and hypercare.
- **Data & technical:** Splunk and SPL daily for incident and usage analysis; REST, OAuth2, mTLS; Postman; Python, TypeScript and cloud builds on Vercel and Neon Postgres; z/OS and COBOL background.
- **Leadership & collaboration:** Influence without reporting authority across 9 country organisations; teams in Germany, Poland and India; adoption campaigns across a ~200 FTE estate.

EDUCATION & QUALIFICATIONS

B.E. (Bachelor), Electronics & Communication Sri Jayachamarajendra College of Engineering, Mysore, 2010

- PMP, ITIL V3 Expert, SAFe Scrum Master. English C1/C2, German B1 (telc). German citizen.
