

## BANKING DOMAIN × AI PRODUCT

# I know how banks' payment systems actually work — and I **ship**.

15+ years inside European banks' payments and Open Banking systems, now building toward AI product management. Not just specs: I designed and shipped a multi-bank Open Banking prototype with a GenAI transaction categorizer that cut unclassified transactions by ~80% on its evaluation set.

Product Manager, Service Operations (PSD2 / Open Banking) · Munich, Germany

## THE FLAGSHIP BUILD

## A multi-bank Open Banking TPP with a shipped GenAI feature

**SELF-DIRECTED PROTOTYPE · BUILT WITH CLAUDE CODE AS PAIR-PROGRAMMER**

### Open Banking aggregation + a three-tier GenAI transaction categorizer

After years managing Open Banking from the *bank's* side, I wanted the *TPP developer's* side — where the friction is, and where AI actually moves the needle. So I built it. I authored the PRD and made every product, architecture, and integration decision;

Claude Code wrote the implementation under my direction. A rare, hands-on test of using AI as a product-development partner.

#### WHAT IT DOES

- ▶ Integrates **five European banks at the sandbox-API level** (Nordea, Commerzbank, UniCredit, Deutsche Bank, ING) over Berlin Group / NextGenPSD2 — OAuth2, mTLS, and HTTP Request Signatures (ING the hardest: two key-pairs, two keyId formats).
- ▶ Multi-tenant Flask app with per-user bank connections, multi-currency aggregation via live ECB rates, consent + SCA flows.
- ▶ Ships a **GenAI transaction categorizer** — a three-tier hybrid router: hand-curated overrides → SQLite cache → a local LLM (Ollama + Qwen 2.5 3B) returning structured JSON {category, confidence, reasoning}.

#### WHAT SHIPPED

- ▶ **Unclassified transactions cut ~80%** — from 217 to 42 of 1,303 — measured on an evaluation harness comparing rule-based vs AI categorization.
- ▶ Caught a real **LLM bias bug** in evaluation (merchant names mis-routed to the wrong category) and fixed it through the override layer — the durable "LLM + overrides" pattern.
- ▶ Splunk-shaped structured JSON logging on every sync event — the same observability discipline I apply in production, now on the TPP side.

Honest scope: a working prototype on banks' *sandbox* APIs, built as a learning vehicle and AI-PM portfolio piece — and the source of a genuinely dual bank-side + TPP-side view of Open Banking that's rare in the market.

Python / Flask

Berlin Group / NextGenPSD2

OAuth2 · mTLS · HTTP Request Signatures

Ollama + Qwen 2.5 3B

Structured JSON output

Prompt caching (SQLite)

Evaluation harness

PRD-first

#### WHAT I BRING

**Domain depth and a shipped AI feature — the combination is the point**

**Builder**

I don't just write requirements — I shipped a GenAI feature with a real evaluation harness, a documented model-failure bug and fix, and structured-output discipline. PRD-first, metric-out.

### Domain expert

15+ years across UniCredit, Nordea, and GE Capital/Bank BPH; Open Banking across 9 countries from the bank side and a TPP from the developer side. Most AI-PM candidates at banks can't match the domain depth.

### Operator in regulated environments

Audit support, P&L and sourcing ownership, SLA turnarounds, and frameworks adopted org-wide. I know how to get things done inside complex, compliance-bound organisations.

## EXPERIENCE

### Top-tier European banks, 2010–present

Sep 2019 – present  
Munich, Germany

#### Product Manager, Service Operations (PSD2 / Open Banking)

UniCredit

- ▶ Designed a Splunk-based Open Banking API monitoring & alerting framework across 9 European countries that cut regulatory incidents **99%** — now the bank's standard approach (operational / SRE craft, and the credibility foundation under everything else).
- ▶ Used Microsoft Copilot in my own workflow to automate Open Banking ticket triage, impact analysis, and response drafting — **34%** faster personal response/resolution. (An org-wide tool I applied to my work — conviction that AI has real leverage in regulated operations.)
- ▶ Drove the technical case to migrate the Open Banking developer portal to a new API-gateway platform and aligned 9 country entities behind it; recommendation approved by senior management.
- ▶ Contribute IT-side input to the bank's PSD3 / PSR feasibility work, including the Verification-of-Payee component.

- ▶ Supported the 2024 Hungarian National Bank Open Banking audit from the IT side — furnished technical evidence and drafted answers across ~20 areas, surfacing a compliance gap with a remediation plan; no significant findings.

2016 – 2019

Poland

### Senior IT Service Manager · Service Transition Manager

Nordea Bank

- ▶ Held P&L for software products in the portfolio; drove the commercial-model change from Time & Material to Managed Services with a parallel vendor switch — then diagnosed post-cutover SLA breaches and recovered to a **36%** regulatory-reporting SLA improvement.
- ▶ Built the Nordea Service Transition Framework from scratch — adopted as the organisational standard — and ran 5 large-scale service transitions end-to-end, on time and on budget.

2010 – 2016

Gdańsk · Bangalore

### Service Delivery Lead (deployed to GE Capital / Bank BPH)

Attra Infotech

- ▶ Built a 24×7 banking-application support operation from zero around an **8+ member multicultural team** — ITIL processes, SLAs/KPIs, on-call coverage; sustained beyond contract.
- ▶ Led requirements and scoping for Mastercard & Visa scheme-compliance projects, VisionPLUS®, and FICO® Falcon® implementations — foundational card-payments and ISO 8583 expertise.

## SKILLS

## Where domain, AI, and delivery meet

### AI & technical

GenAI feature design · local LLMs (Ollama, Qwen) · structured JSON output · prompt engineering · evaluation harnesses · Python / Flask · SQL · reading code & engaging engineering teams (mainframe background: z/OS, COBOL, JCL).

## Payments & Open Banking

PSD2 / Open Banking (bank-side & TPP-side) · Berlin Group / NextGenPSD2 · OAuth2 · mTLS · HTTP Request Signatures · consent & SCA · ISO 8583 · card-scheme compliance · regulatory reporting & audit readiness.

## Operations & governance

ITIL service management · SLA/KPI frameworks · vendor selection & sourcing · P&L & cost control · service transition · incident/problem/change · Splunk · ServiceNow · JIRA · cross-functional delivery without formal authority.

### CERTIFICATIONS & EDUCATION

AI For Everyone — DeepLearning.AI (2026)

ITIL® V3 Expert

PMP® (through 2027)

Certified SAgE® Scrum Master

B.E. Electronics & Communication (First Class w/ Distinction)

German — telc B1

### CONTACT

## Always glad to talk banking, payments, and AI products
