SUMMARY

Product manager who ships AI into regulated banking, hands-on. 15+ years across European banking IT (UniCredit, Nordea, GE Capital), now the IT-side bridge between regulators, control functions, and engineering on UniCredit's Open Banking platform. It connects 250+ TPPs across 9 markets at roughly 35M API calls a month, and the monitoring framework I drove cut regulatory incidents 99%. I have designed and shipped six live AI product builds, each carried from PRD to deployed demo with Claude Code; the section below links every live demo. I work comfortably across LLM evaluation, prompt and structured-output design, agent architectures, and the AI governance a regulated platform has to satisfy.

SELECTED AI PRODUCT BUILDS

Self-driven, PRD-first, built with Claude Code as pair-programmer. All are live; the links open the running demos.

Digital Euro: PSP Operations Console

[Live demo](#)

React console that folds the Digital Euro into an existing payment estate: a holding-limit and waterfall engine, ISO 20022 settlement over DESP/TARGET, compliance, and a phased roadmap. React 18, 78 tests.

Cadence: AI Lending Decision Engine

[Live demo](#)

Turns a borrower's Open Banking data into an explainable, auditable lending decision: a GenAI categoriser feeds a deterministic affordability engine (German Haushaltsrechnung), with multibank aggregation, a credit-bureau knock-out rule, and a GDPR Art. 22 human-review path. Next.js 16, Open Finance / FIDA.

Open Finance Data: B2B use-case suite

[Live demo](#)

Eleven B2B Open Finance use cases (account verification, income and affordability, spending insights, MCC normalisation) on a synthetic-bank foundation, each a headless API plus a demo console. Python.

Multi-Bank Open Banking TPP

[Live demo](#) · [Repo](#)

Multi-tenant PSD2 aggregator integrating five EU banks on Berlin Group / NextGenPSD2. A three-tier GenAI categorizer (local LLM via Ollama + Qwen 2.5 3B) cut unclassified transactions ~80% (217 to 42 of 1,303 evaluated); an override layer surfaced and fixed a real LLM bias. Python / Flask.

Open Banking Payment Agent: Human-in-the-Loop Initiation

[Live demo](#)

Initiates account-to-account payments on the TrueLayer sandbox under supervision: it checks that the payee name really owns the account before anything moves, and stops for human approval when something looks wrong. The language model advises at the edges and never makes the payment decision. A LangGraph state machine with interrupt-based human-in-the-loop, an external checkpoint so a paused run survives a stateless runtime, and a versioned evaluation suite that asserts the path a run took. Python / LangGraph.

Agentic Commerce: Payment-Authority Gate

[Live demo](#)

An AI shopping agent that clears a payment-authority gate before checkout: an Ed25519 agent identity, a scoped single-use issuer-signed mandate (Mastercard Verifiable-Intent style), and Open Banking settlement after one human SCA, with every agent call RFC 9421 signed.

RELEVANT EXPERIENCE

UniCredit

Munich, Germany

Product Manager, Service Operations (PSD2 / Open Banking)

2019 – Present

- Own the Open Banking platform connecting 250+ licensed Fintechs to UniCredit's 9-market footprint under PSD2, around 70 API endpoints at roughly 35M API calls a month. I align engineering, security, compliance, and 9 national regulators around it.
- Built a Copilot-driven ticket-triage flow in my own operations, cutting incident resolution time by 34%.
- Drove the Splunk-based PSD2 monitoring and data framework across all 9 markets, cutting regulatory incidents 99%. It is now the UniCredit-wide API monitoring standard and the backbone for every audit cycle.
- The IT-side anchor for national-regulator PSD2 audits across 9 markets, providing evidence and answers on API behaviour, security, onboarding, and consent integrity. Every cycle closes without significant findings.

Nordea

Gdańsk / Gdynia, Poland

Senior IT Service Manager

2018 – 2019

- Owned Nordea's Capital & Credit Risk and General Ledger application portfolio, a SAP, ETL, and mainframe stack underpinning the bank's regulatory capital reporting and financial books.
- Restructured supplier governance across 3 providers, delivering the regulatory-reporting artefacts 36% faster.
- Held portfolio P&L: forecast, budget, and run-rate management to annual targets.

Service Transition Manager

2016 – 2018

- Designed the Nordea Service Transition Framework from scratch, covering non-functional requirements, knowledge-transfer protocols, go-live criteria, and early-life-support SOPs. It was adopted as the organisational standard and applied across 5 large-scale services, all transitioned on time and on budget.

- Owned the transition lifecycle for each service: design, cut-over, go-live, knowledge transfer, hypercare. Held the gate decisions and the cross-team accountability that determined operational readiness.

Attra (deployed to GE Capital / Bank BPH)

Gdańsk, Poland

Service Delivery Lead

2014 – 2016

- Stood up a 24x7 support function from scratch for the Postilion card switch (ACI Worldwide), which had none before, building the operating model and SLA/KPI baseline around an 8+ member multicultural team.
- Defined the incident, problem, and change processes the function ran on, and the metrics it was held to.

Attra

Bangalore, India

Senior Software Engineer

2010 – 2014

- Scoped, designed, and shipped MasterCard and Visa scheme-compliance releases on the VisionPLUS® card-processing platform, from proposal through delivery, against scheme-mandated deadlines.
- Supported FICO® Falcon® Fraud Manager on the mainframe side (COBOL, JCL, z/OS), covering batch execution, optimisation, and environment management.

SKILLS

- AI / ML practitioner:** LLM evaluation harness design, prompt engineering, structured JSON output, local LLMs (Ollama + Qwen 2.5 3B), three-tier hybrid categorisation, agent architectures (Ed25519 / RFC 9421 mandates), MCP, LLM bias debugging, Claude Code
- AI governance & compliance:** GDPR Art. 22 automated-decision safeguards, EU AI Act awareness, data-protection-by-design, model evaluation and audit evidence, partnering with DPO / Legal / control functions
- Product & delivery:** End-to-end product ownership, PRD authoring, requirements definition, user stories & acceptance criteria, roadmap management, cross-functional facilitation across data science and engineering
- Open Banking & Payments:** PSD2, Berlin Group / NextGenPSD2, Open Finance / FIDA, ISO 20022, OAuth2, mTLS, SCA & consent flows, A2A and instant payments (SEPA Inst), ISO 8583
- Agile & tools:** Scrum (Certified SAFe Scrum Master), Kanban, Jira, Confluence, ServiceNow, Splunk (architecture-level), React, Python / Flask, SQL

EDUCATION

Sri Jayachamarajendra College of Engineering, Mysore

2010

B.E. Electronics & Communication Engineering, First Class with Distinction

OTHER QUALIFICATIONS

- AI For Everyone, DeepLearning.AI, 2026
- Certified SAFe® Scrum Master
- PMP® (valid through 2027)
- ITIL® V3 Expert
- Telc Deutsch B1
- Languages: English, full professional proficiency; German, B1 (progressing to B2 by end of 2026)
- Citizenship: Germany
